

AESCULAP® STERILE CONTAINER MANAGED EQUIPMENT SERVICE

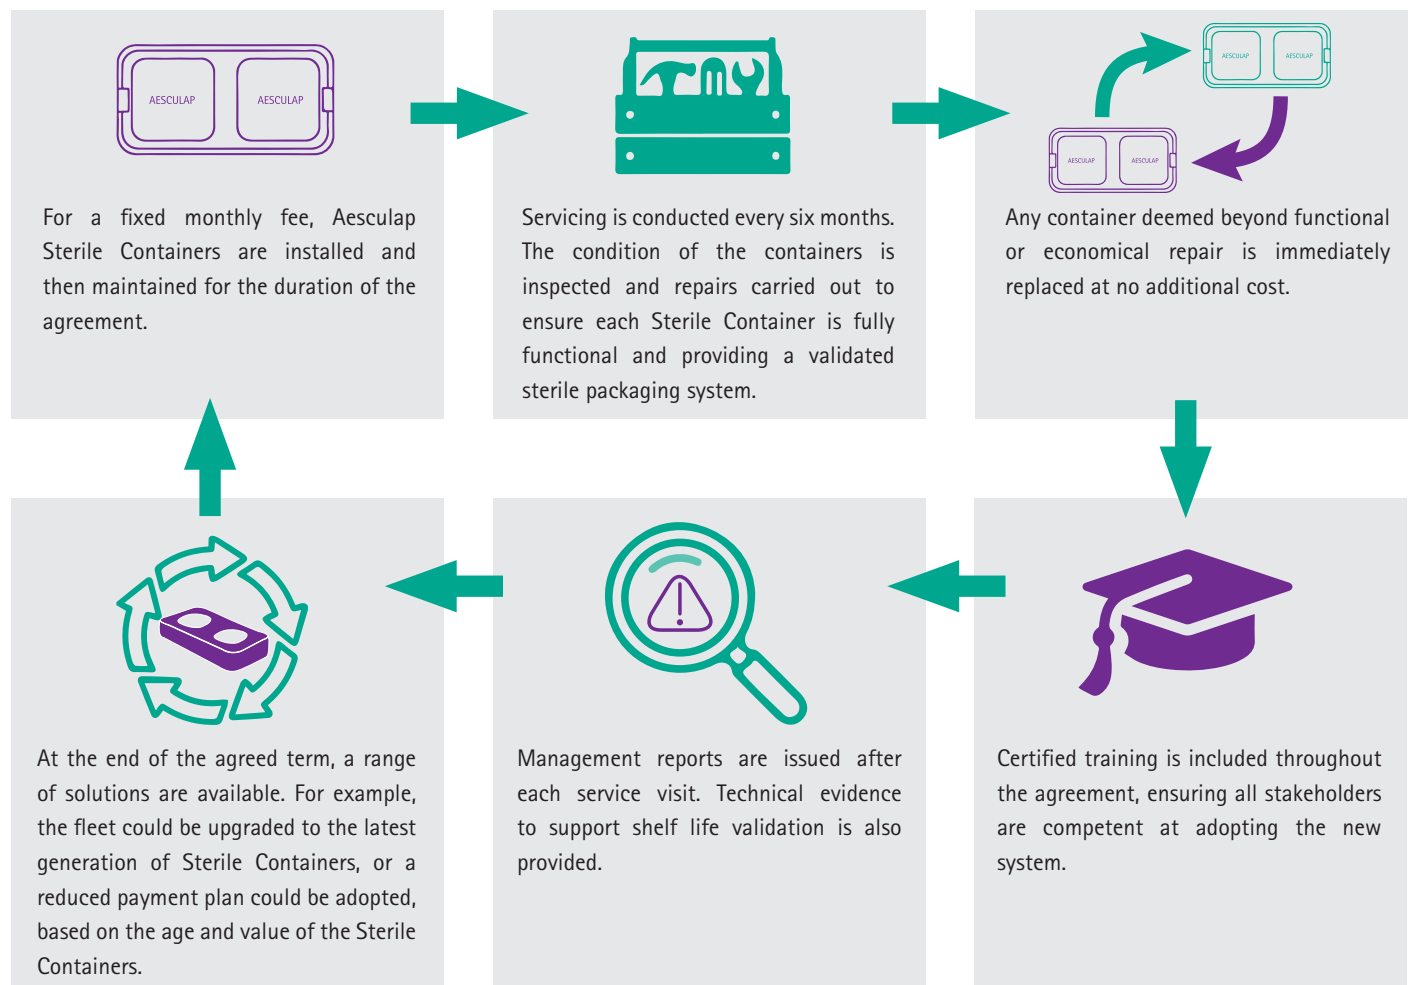

With healthcare providers tasked with introducing modern, efficient, lean processes to meet the demand for patient related services, traditional working practices are being scrutinised more than ever before.

One such area is the packing of surgical instrument sets with disposable wrapping materials to deliver aseptic instrument sets to theatres. Through the conversion to a rigid sterile packaging system, significant cost savings and efficiency improvements can be achieved.

Why a Managed Equipment Service for Sterile Containers?

Many healthcare providers are experiencing significant pressures on their capital funding and are looking for alternative methods to finance investments. There is also a drive to ensure that equipment is maintained and is fully functional throughout its lifecycle, thus deriving the maximum benefit and return on the investment made.

The Aesculap Sterile Container Managed Equipment Service allows you to convert to Sterile Containers without any capital outlay. The required volume of Sterile Containers are installed up front and maintained on an ongoing basis, throughout the product's lifecycle.

HOW TO ADOPT A MANAGED EQUIPMENT SERVICE?

B. Braun have an experienced consultancy team who will partner with you throughout the entire process of converting from disposable wrap to Sterile Containers.

Through the utilisation of digital technology, the Surgical Asset Management (SAM) app will guide you through the entire process, collating all the information required to produce a compelling business case for change, analysing where efficiency, productivity and financial savings could be achieved.

Industry experts are also on hand to demonstrate how Sterile Containers can be adopted within existing infrastructures, eliminating any capacity concerns that a decontamination service provider may have.
