

# WOUND BED PREPARATION PATHWAY

Wound cleansing and debridement pathway for all chronic and acute wounds. Saline should NOT be used for wound cleansing\*

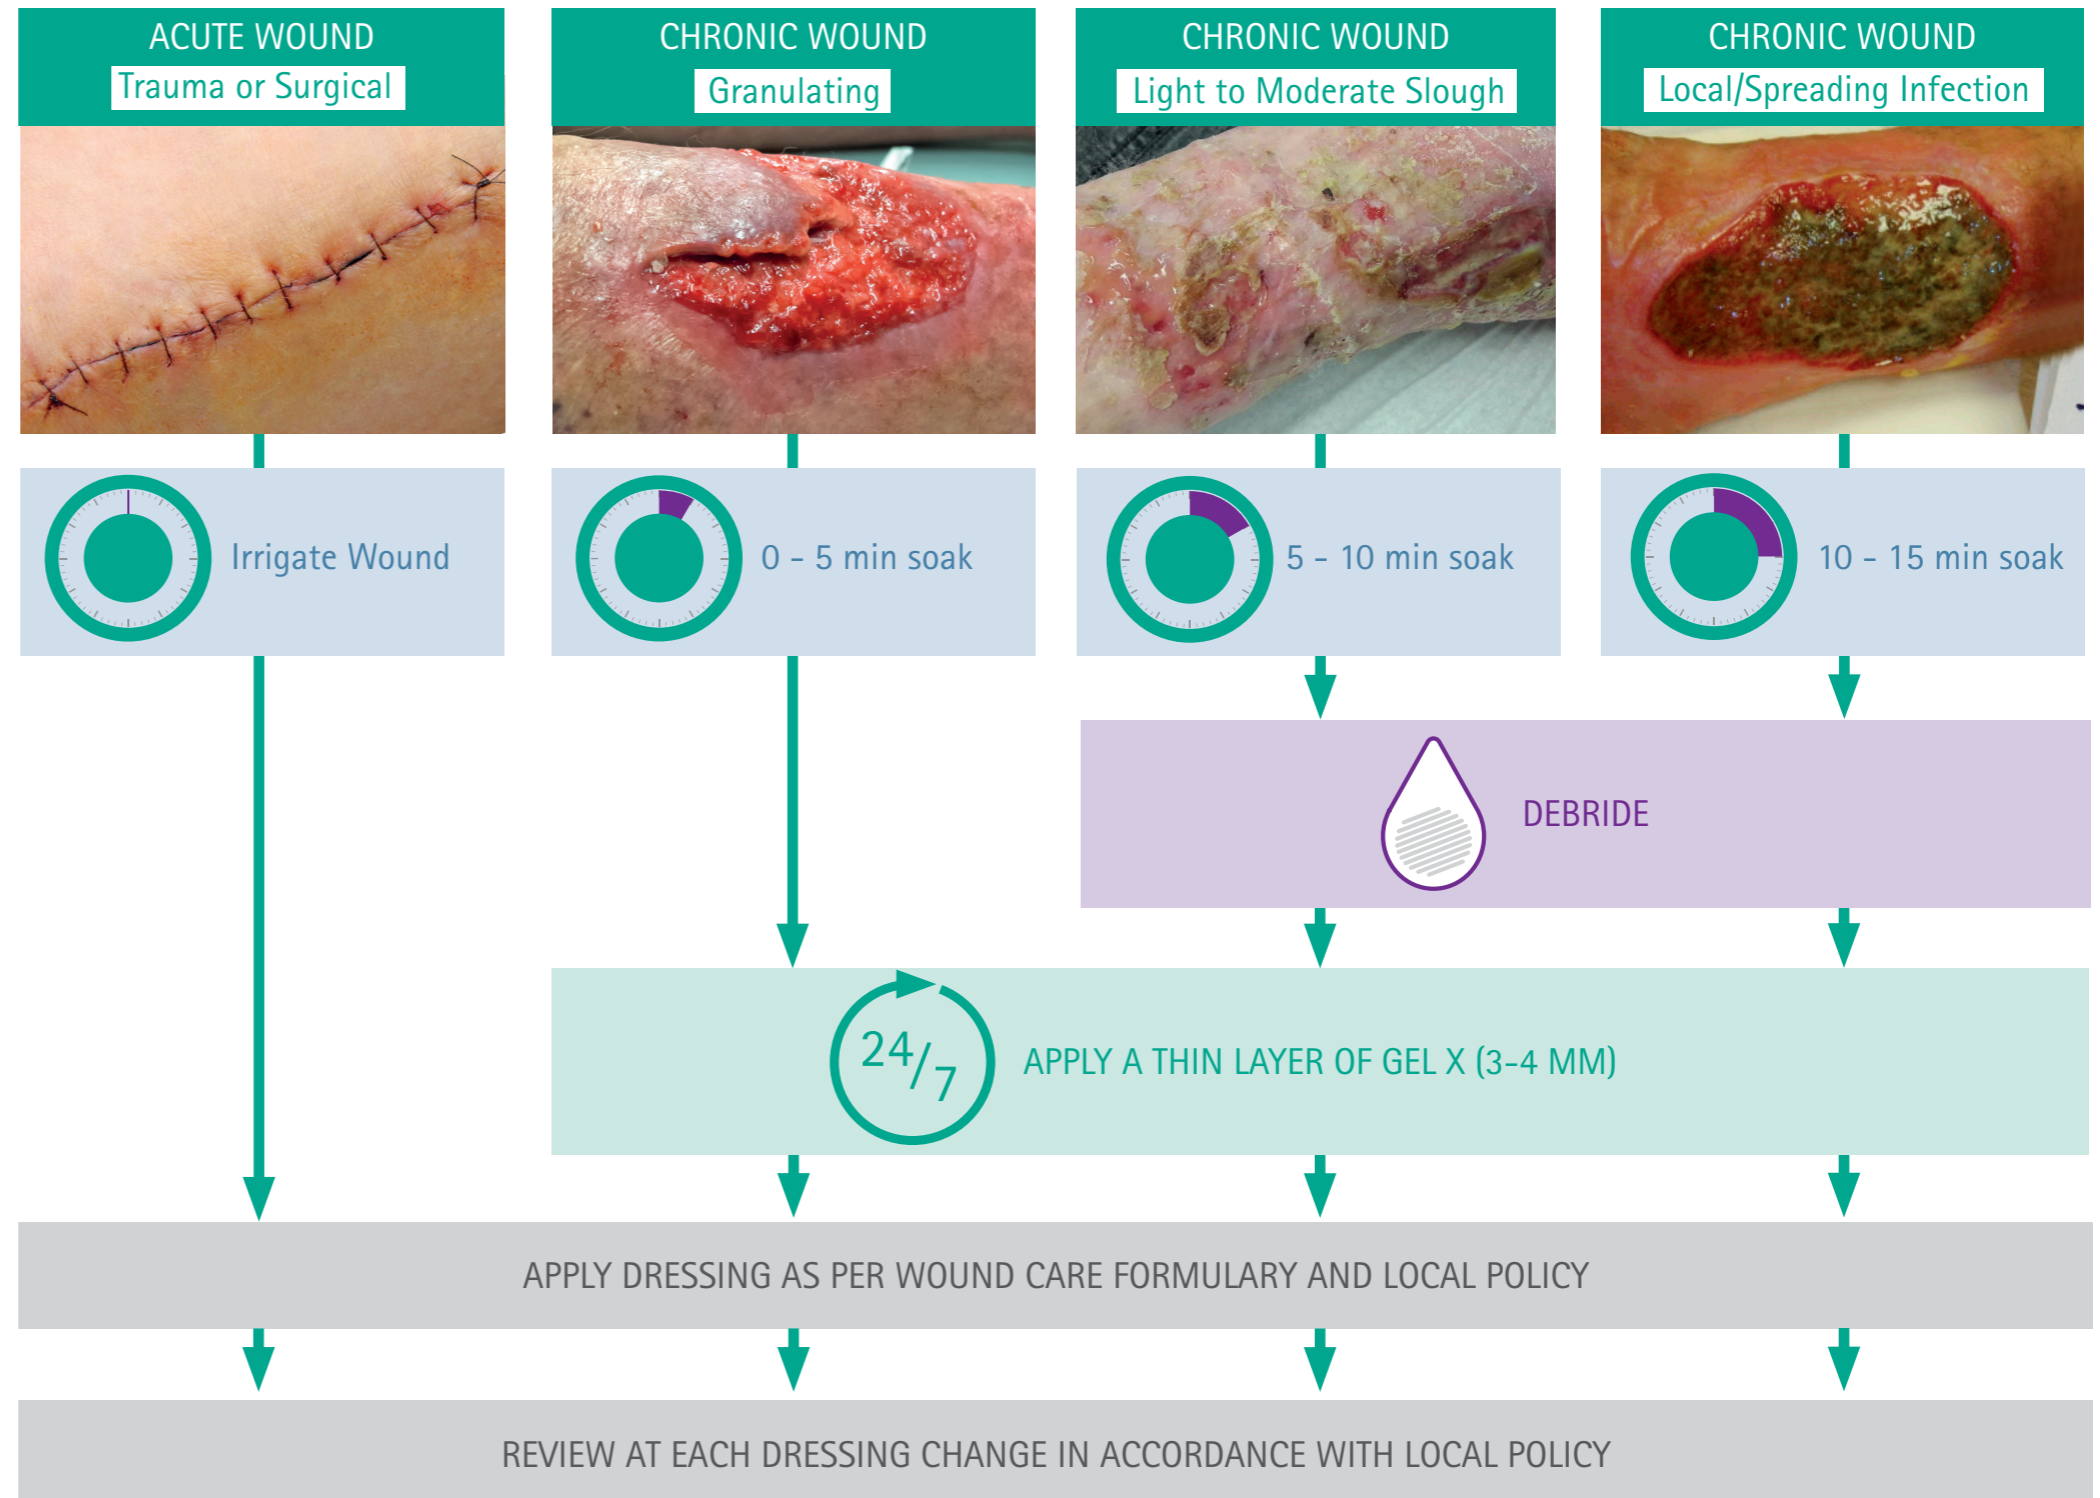

The principles of wound bed preparation promote maintenance of a healthy wound bed through therapeutic wound cleansing, disruption of biofilm and removal of devitalised tissue through debridement<sup>1</sup>. Treatment strategies should be based on the cycle of biofilm<sup>1</sup> and the use of the Prontosan range aims to disrupt and prevent reformation of biofilm for effective wound bed preparation.

 **Cleanse - Prontosan Solution**  
TREATMENT OBJECTIVES:  
Cleansing. Remove debris. Disrupt biofilm. Preparation of wound bed for debridement.

 **Debride - Prontosan Debridement Pad**  
TREATMENT OBJECTIVES:  
Lift and remove debris and slough. Remove biofilm.
