WOUND BED PREPARATION PATHWAY

Wound cleansing and debridement pathway for all chronic and acute wounds. Saline should NOT be used for wound cleansing*

The principles of wound bed preparation promote maintenance of a healthy wound bed through therapeutic wound cleansing, disruption of biofilm and removal of devitalised tissue through debridement¹. Treatment strategies should be based on the cycle of biofilm¹ and the use of the Prontosan range aims to disrupt and prevent reformation of biofilm for effective wound bed preparation.

**ACUTE WOUND**
- **Trauma or Surgical**
  - **Cleanse**
  - **Debride**
  - **Protect**

**CHRONIC WOUND**
- **Granulating**
  - **Cleanse**
  - **Debride**
  - **Protect**
- **Light to Moderate Slough**
  - **Cleanse**
  - **Debride**
  - **Protect**
- **Local/Spreading Infection**
  - **Cleanse**
  - **Debride**
  - **Protect**
